GUI Documentation

The documents in the following files (03.51 and 05.80 set) document the intended layout of HRE's GUI screens and the intended icons for use within them.

The diagrams contained in these documents are mockups. They show the content in the order of expected use. The final outcome in code is likely to be more compact. The use of heading and value fields on separate lines is the simplest method that can handle the change in length of translated strings from language to language. These designs are not considered final but have been produced so that there is a common frame of reference for programming guidance and subsequent test review.

The following section is a cross-reference to GUI component use and dependencies.
