

BR_PrinterConfig – Printer Services

Revision history

2017-03-24	Robin Lamacraft	Original draft
2018-06-05	Rod Thompson	Name change
2019-07-02	Don Ferguson	Revise completely

SCOPE

This module was intended to be used to set or retrieve settings about the current printer used in the Client component of HRE. This includes any settings applying to paper size, print quality, etc.

ACTIONS

There is little value in this module existing in HRE, as the functionality required is embedded in Java in the PrintServiceLookup class and specific capability for table printing exists in the tableToOutput.print function (as used in HG0531Output code).

USED BY

All printer output.

DATA UNDER CONTROL OF THIS MODULE

None.

REQUIRED EXTERNAL DATA UNDER CONTROL OF ANOTHER MODULE

None.

REQUIRED SERVICES

Operating system settings access.

APPLICATION PROGRAMMING INTERFACE (API)

Defined by Java, as above.
