

How to build the HRE Main Window

Revision History

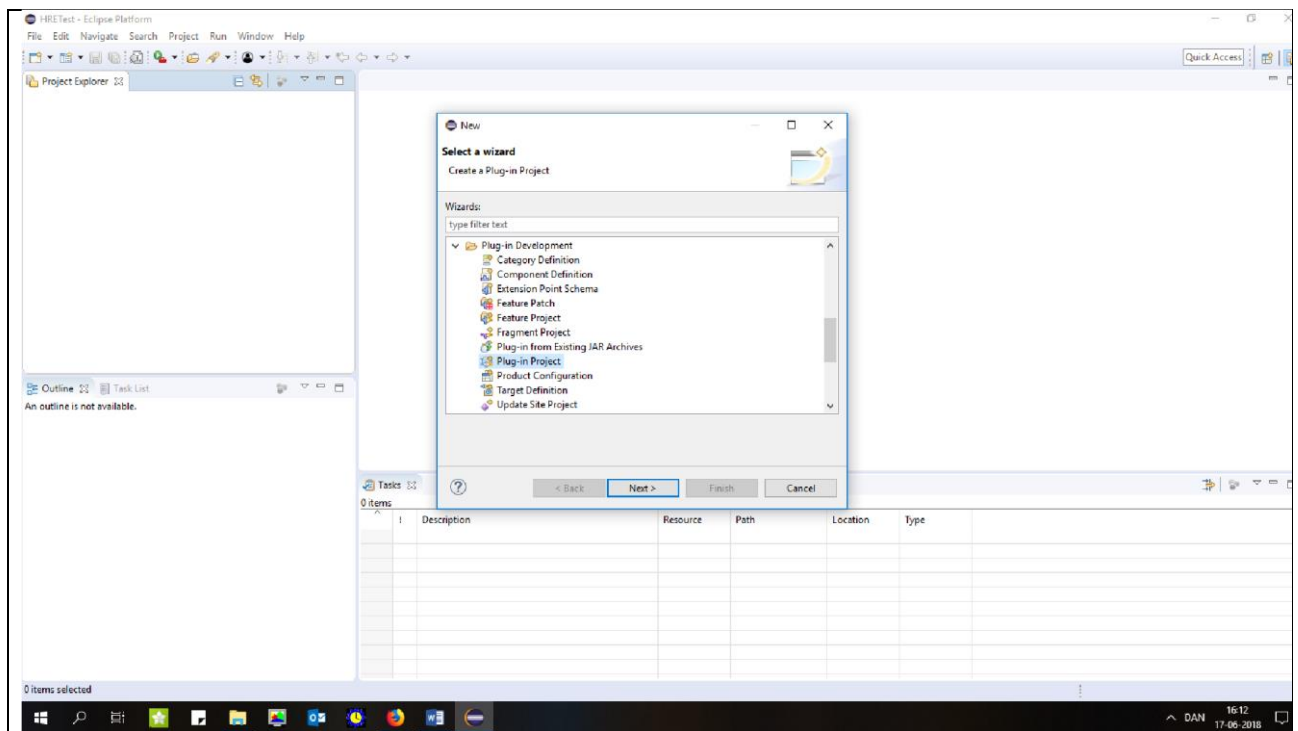

2018-06-17	Michael Erichsen	Original draft
2018-07-02	Don Ferguson	Added extra assistance notes at end, based on email of 27 June from Michael E

HRE is an Eclipse e4 Rich Client Platform (RCP) application.

Tooling

You need an Eclipse 'Workbench for RCP programmers' set up.

Look and feel

You can get to know the tool by building the default e4 RCP application:

New Plug-in Project

Plug-in Project

Create a new plug-in project

Project name:

☒ Use default location

Location:

Project Settings

☒ Create a Java project

Source folder:

Output folder:

Target Platform

This plug-in is targeted to run with:

☒ Eclipse version:

☐ an OSGi framework:

Working sets

☐ Add project to working sets

Working sets:

New Plug-in Project

Content

Enter the data required to generate the plug-in.

Properties

ID:	<input type="text" value="org.hostoryresearch.mytest"/>
Version:	<input type="text" value="1.0.0.qualifier"/>
Name:	<input type="text" value="Mytest"/>
Vendor:	<input type="text" value="History Research Environment Limited"/>
Execution Environment:	<input type="text" value="JavaSE-1.8"/> <input type="button" value="Environments..."/>

Options

☒ Generate an activator, a Java class that controls the plug-in's life cycle

Activator:

☒ This plug-in will make contributions to the UI

☐ Enable API analysis

Rich Client Application

Would you like to create a rich client application? ☒ Yes ☐ No

< Back

Finish

Cancel

Templates

Select one of the available templates to generate a fully-functioning plug-in.

☒ Create a plug-in using one of the templates

Available Plug-in Templates:

- Eclipse 4 RCP application
- RCP 3.x application (minimal)
- RCP 3.x application with a view
- RCP 3.x application with an intro
- RCP 3.x Mail Template

This wizard creates a standalone Eclipse 4 RCP application with a sample part and the basic commands to quit the application.

Extensions Used

- org.eclipse.core.runtime.products

< Back

Next >

Finish

Cancel

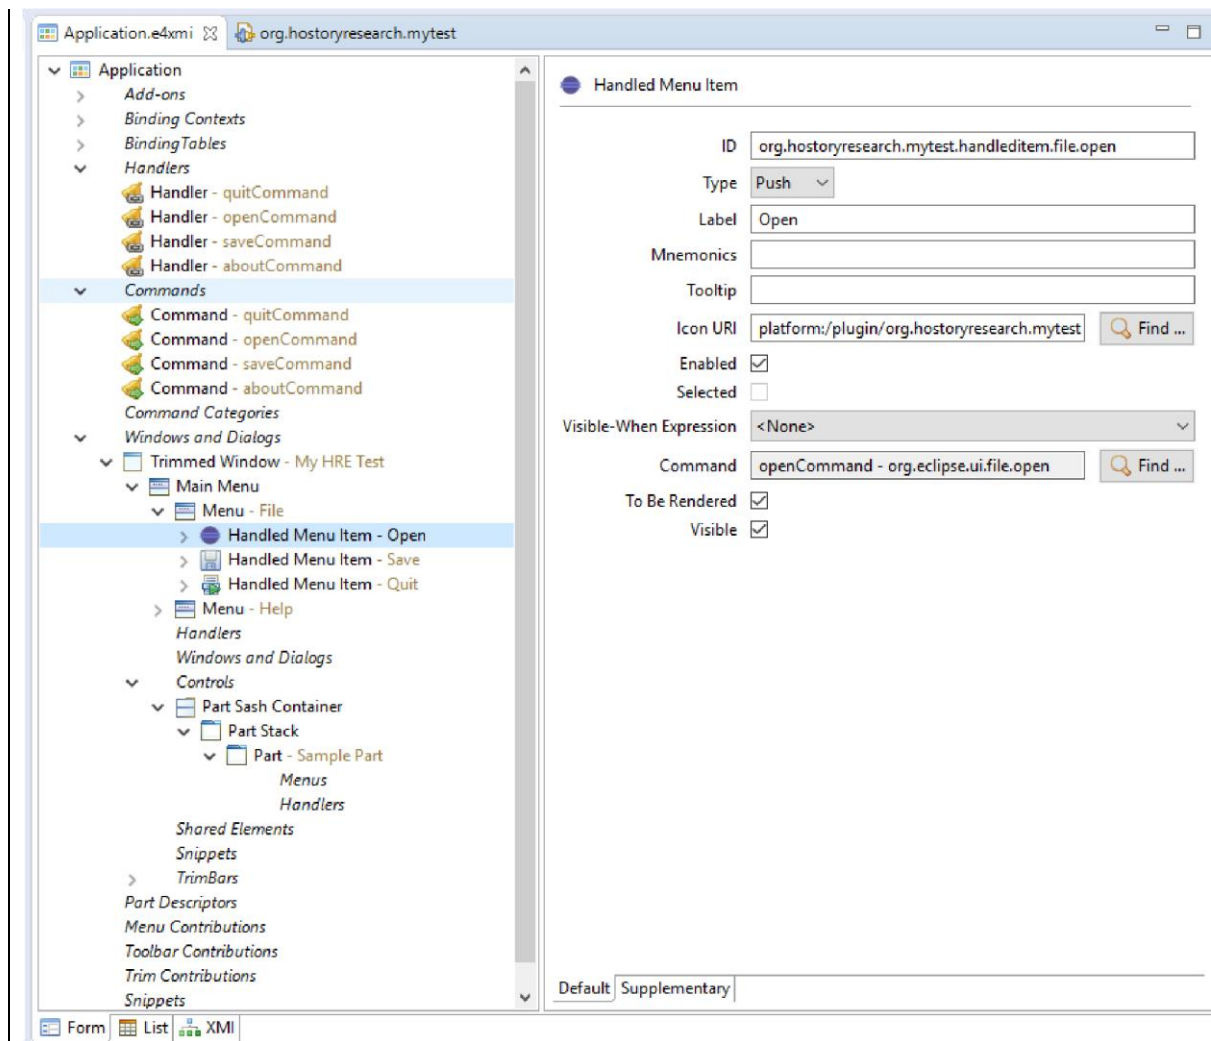

The screenshot shows the 'Basic Eclipse 4 Application' wizard. The title bar reads 'Eclipse 4 RCP Application with basic part and commands'. The main heading is 'Basic Eclipse 4 Application' with a sub-description: 'This template creates an Eclipse 4 RCP application that consists of an application window and optionally consists of a part, several commands and a'. A yellow folder icon with a blue handle is shown to the right. The form contains the following fields and options:

- 'Application window title:' with the text 'My HRE Test'.
- A checked checkbox labeled 'Create sample content (part, menu, command...)'. Below it is a text field for 'Java package name:' containing 'org.hostoryresearch.mytest'.
- An unchecked checkbox labeled 'Add life cycle class'. Below it is a text field for 'Life cycle class name:' containing 'E4LifeCycle'.

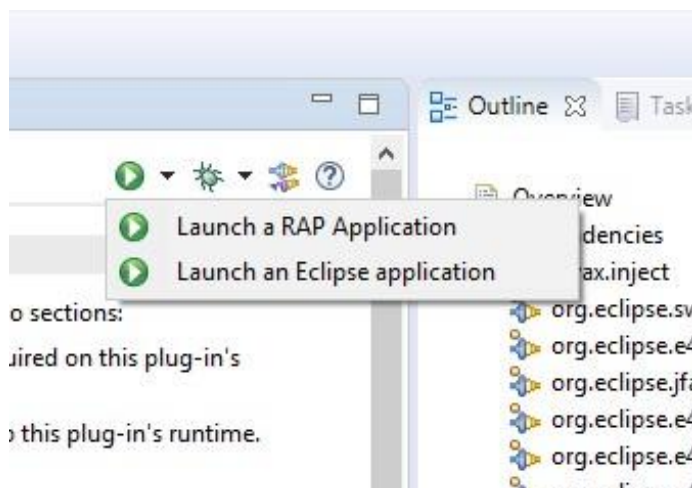

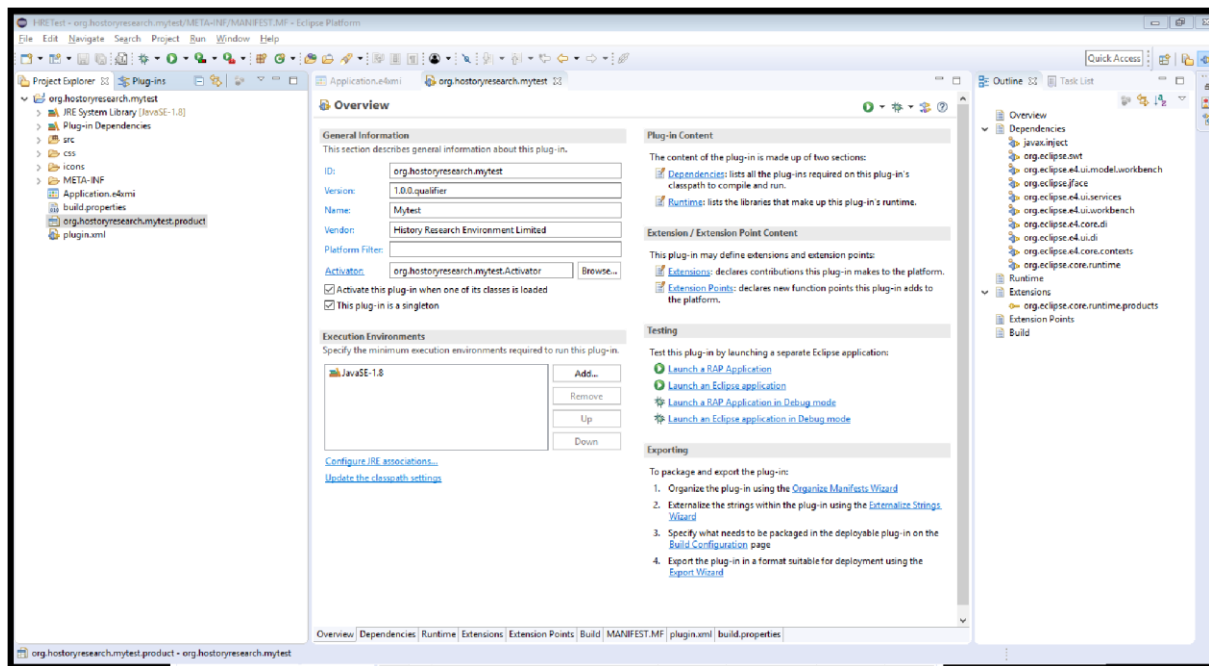

At the bottom, there is a help icon (question mark), and four buttons: '< Back', 'Next >', 'Finish' (which is highlighted with a blue border), and 'Cancel'.

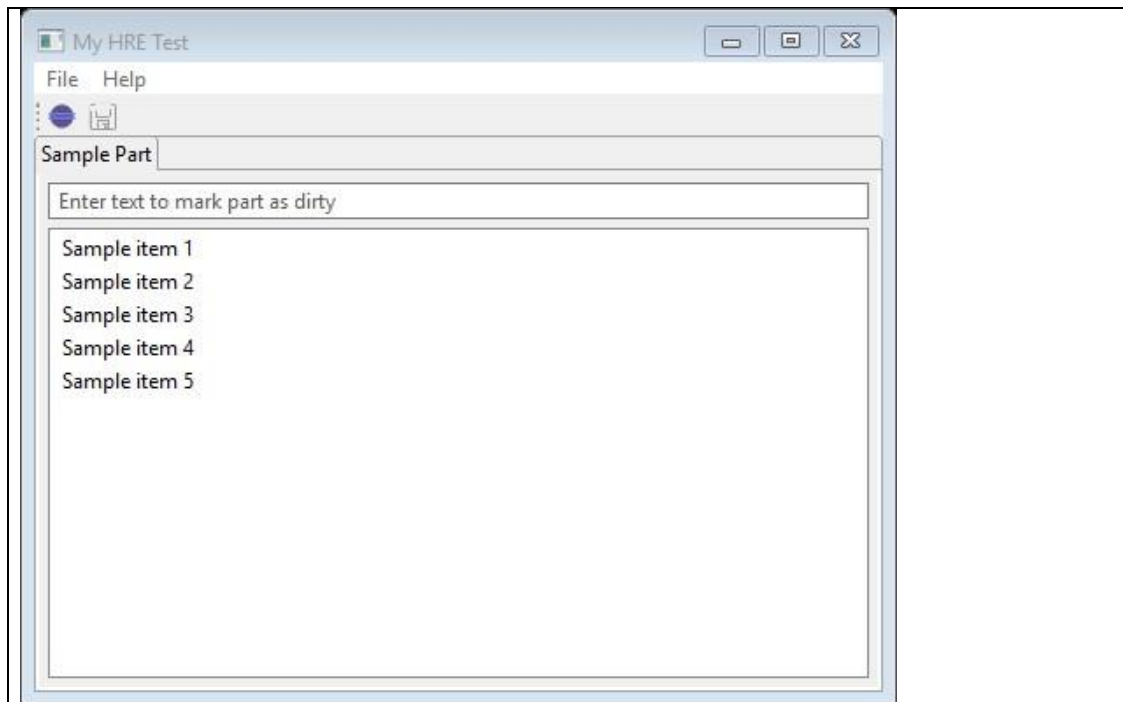

Two views are opened when clicking Finished.

Application.e4xmi defines menus, perspectives, view parts etc. You can play around with this.

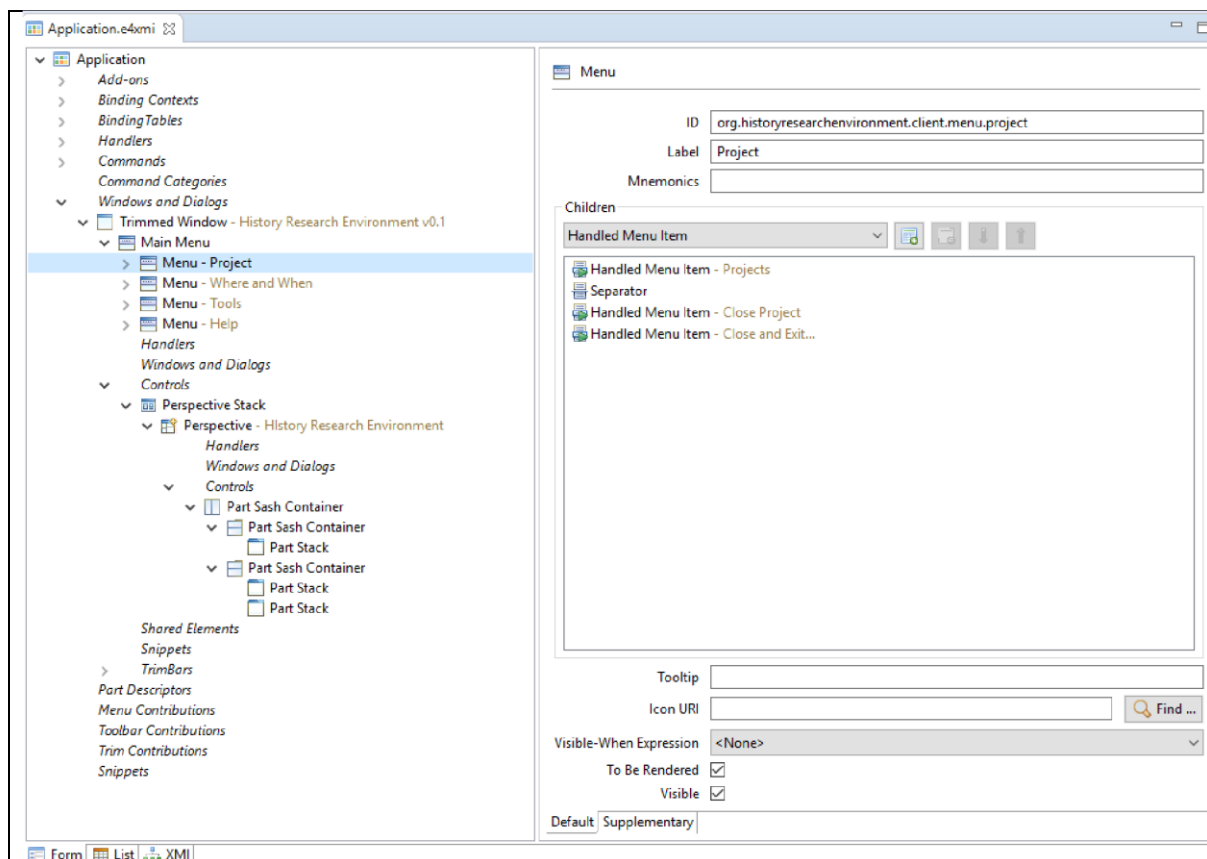

You can launch the Eclipse application from the product file, which is also opened -

The HRE Main Window

The main window has a hierarchy of perspective stack, perspective etc.:

None of the current view parts are visible here, as they are created dynamically by handler code.

Extended Installation Checks

Prerequisite: Eclipse for RCP installed.

Expand the releng (Release Engineering) folder.

Expand the org.historyresearchenvironment.client.product folder.

Open the org.historyresearchenvironment.client.product file.

Click the green "Run" arrow in the Product Configuration Editor and make sure that it starts an Eclipse application, not a RAP application.

If a "Validation" dialog opens with "The following problems were detected", we need to handle some required bundles. We will park that for now.

If you get a message dialog saying "Java Virtual Machine Launcher. Error: Could not create the Java virtual machine. Error: A fatal exception has occurred. Program will exit", then we have a mismatch between Eclipse and Java versions.

Do as follows:

- Close the message dialog.
- Select the run menu item in Eclipse and select "Run Configurations".

There will be a newly created configuration, probably called "org.historyresearchenvironment.client.product".

Open that for editing.

On the main tab select "Clear" and "Workspace" and unselect "Ask for confirmation before clearing"

On the Arguments tab remove all VM arguments. They are only valid for Java 9, not Java 8.

On the plug-ins tab, note the number of selected plug-ins, e.g. "75 of 1520 selected".

Click "Add required plug-ins" several times, until the number is constant.

Click "Validate Plug-ins", which should reply "No problems were detected"

Click "Apply"

Click "Run".
