GUI_Icon-Record Marker

Revision history

2018-05-25	Rod Thompson	Original draft

SCOPE

Icons are used extensively throughout the HRE application, in all window displays.

This document details use of the icon used to 'mark' records in a list of data.

An example of use being such that where two such records are marked, they can then be swapped (re-ordering the list of data).

Each icon is in fact a button control, with a unique image that identifies its use without additional descriptive text

LOOK AND FEEL

Colour icons may be used in the main application window. (possible issues if user changes background palette)

Black & White icons will generally be used in sub-windows.

ACTIONS

Having firstly selected the target record in a list of data, selection of this icon from the Mouse Right Click menu, causes a copy of the icon graphic to be copied to a field attached to the selected record in the data list, and flags that record for further action (generally reordering of records in the list).
